

SP-PTM FLY OVER

Strong Poles has introduced a new, stylish "Fly-Over" Camera Mount that is designed to get the structure as far away from the camera as possible so that it blocks the least amount of camera view, while still being attractive and functional.

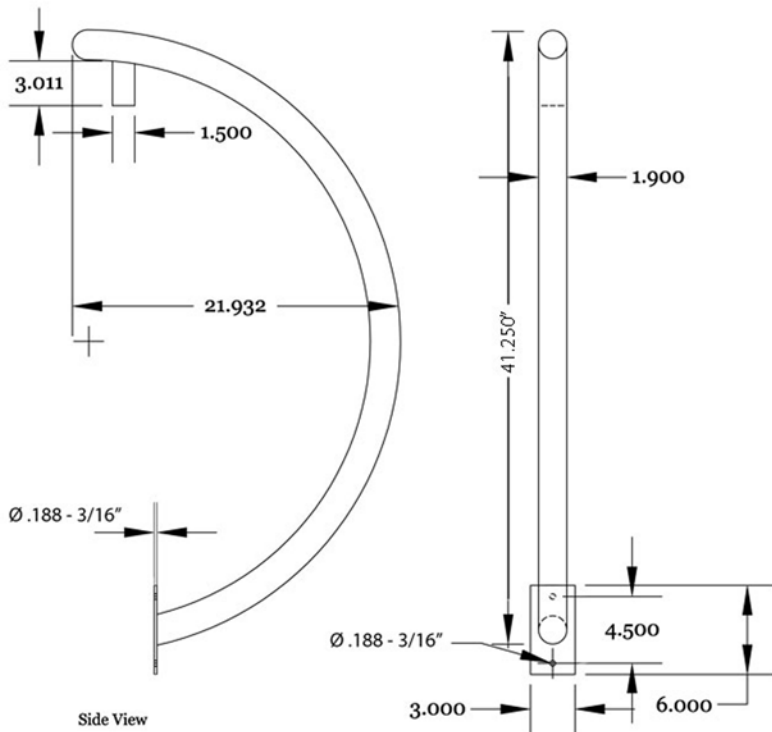

This Fly-Over Camera Mount is constructed out of sturdy 2" Aluminum tubing, and is built strong enough to not only hold a heavy Pendant Mount PTZ Camera, but to also avoid shake from high winds. This design allows full 360 degree views with the tubing being far enough away that only a tiny slice of view is obstructed.

The threaded pipe at the top is a common pipe with 1-1/2" NPT threads that will fit almost any pendant mount camera or other pendant type mounts made by: Axis, Bosch, Vicon, Pelco, CBC/Ganz, Avigilon, etc.

Available in Anodized Bronze or Powder Coat White

Comes with Pole Mounting Hardware and gasket

Shown In White with the SP-PANO Panoramic Dome Camera Mount.
