

4" Vertical Tenon

This unique Lighting Tenon has an upturned Tenon portion in case you need to mount a light vertically. You can gain a little more height by doing this (if needed), and then angle the light downward using its own adjustment knuckle. Or, maybe you are trying to slightly angle the light to reach out further. Whatever the reason, this style mount is now available.

This size Tenon (2-3/8" – the industry standard – T20), will fit most lights with a Tenon mount.
