

## **Strong Strut**

### **10' Sections**

Our Strong Strut Channel sections are Super Strong and are what we cut our smaller Beam Clamps and other Products from.

In case you need longer pieces, here they are. We have 2 profiles available here: Long Slots and Short Slots.

(NOTE: WE also have round holes style available – Call us for those – we don't keep a huge stock, but we usually have them).

Short Slots – 1-1/8" x 9/16" Slots 2" on Center

Long Slots – 3" x 13/32" Slots 4" on Center

These Strong Strut Channels are the large type (1-5/8" x 1-5/8") because we need the strength of the deep channels for what we do.

These Channels are .098 thick (12 gauge) and weigh 1.81 pounds per foot.

These 10' pieces can hold up to 300 pounds, or more if you are cutting smaller sections to use.

These Pre-Galvanized finishes are excellent for indoor or outdoor use.

Galvanizing is G90 per ASTM A653 (0.90 oz/sq ft; 0.77 mil thickness)

Meets physical requirements of Grade 33
